

Andium Truck WiFi™

MOBILE WIFI/LTE HOTSPOT

Fleet-Connectivity Solution for Ensuring Reliable, High Speed In-Vehicle Digital Communications

KEY BENEFITS

- Fast WiFi and LTE data speeds to support Video Teleconferencing
- Rugged, durable housing and device certifications against EM, lightning and shock
- Simple installation into any vehicle type
- Supports multiple carriers to maximize coverage in remote areas
- Best in class SpeedFusion Hot Failover technology for enhanced reliability
- Modular design with multiple options for communications antennas
- Secure device power through terminal blocks or included cable
- Indicator lights for quick reference of system, WiFi and Cellular status
- Integration with existing WiFi and 3G/4G/LTE enabled systems

Andium Truck WiFi™ provides reliable, high-performance digital connectivity for commercial vehicle fleets in an easily-installable and use-adaptable package. Designed to provide high-speed cellular (3G/4G/LTE) and WiFi coverage even in the remotest of areas.

Andium Truck WiFi™ is the perfect solution for expanding the functionality of fleet vehicles to serve as mobile offices, allowing on-site employees to participate in remote meetings with video teleconferencing and high-volume data sharing from the security of their vehicle.

With multiple options for power, antenna arrangement and cellular carrier service, Andium Truck WiFi™ can be customized for the needs of any team across an organization.

Andium Truck WiFi™ allows critical infrastructure support teams to more assuredly reach and convey complex instructions to dispatched team members from operations centers regardless of challenging terrain, weather and/or distance conditions. Best in class technology improves reliability for critical transmissions using SpeedFusion Hot Failover technology to ensure seamless communications in case of single carrier failure.

Communications security is ensured through stateful firewall, denial of service (DoS) prevention, web blocking and web filtering blacklist technology. Additional features include Load Balancing, Advanced QoS, Captive Portal Support as well as advanced networking and VPN functionality.
